

### How do I apply the product?

Apply approximately ½ teaspoon to the palm of your hand, and, transfer to the armpit. Repeat for other armpit.

Apply twice per day:

1. Immediately before getting into bed, at night.
2. Apply again, in the morning, immediately after waking up.

Your skin and hands must be **completely** dry before applying the product.

After the morning application, wait 20 minutes, or longer, and, then wash off the excess product in the shower. This step protects clothing against the small possibility of fading the color of the day clothing. Many people leave it on all day with no fading.

### How often do I apply the medication?

Apply twice a day, every day.

Once the problem is under control, use as needed.

### Warnings:

- For external use only. Apply to underarms only. It can be mildly irritating. Some skin types can get temporarily darker, or lighter, when irritated. These effects are rare.
- It may fade the colors of night clothing—due to its acidity. This is not common.
- Never use the product on wet, irritated skin, or, broken skin. Wash your hands afterwards.
- Stop use if rash or irritation occurs. The safety of the product has not been determined for other uses, ask a doctor before use if you have kidney disease, or are pregnant.
